Exercise 6: Qt - Tutorial, Chapters 4-7

Winter Term 2018/19

Chapters 4 to 7 are dealing with the creation of an own widget, the use of the signal-and-slot mechanism, and the layout of widgets in a window.

Work through Chapters 4 to 7 of the tutorial. Make the following changes in order to understand how the parts work together.

1. Chapter 4: change the minimum and maximum size of the window.

2. Chapter 5: change the range and the start value. What happens, if you omit the `layout->addWidget()`-method calls? Why do some window not appear on the screen? How can you make them appear?

Have fun, Theo and Ralf
